

ANALYSIS AND INTERPRETATION

Objective

To analyze customer complaint data using Microsoft Excel and identify patterns in complaint status, product categories, geographical distribution, response patterns, and complaint trends over time. The analysis aims to identify areas with higher complaint volumes and derive meaningful insights from the dataset.

1) Complaint Status Analysis

Category	Value
Closed	8
Closed with explanation	41044
Closed with monetary relief	14697
Closed with non-monetary relief	5273
In progress	1494
Grand Total	62516

Conclusion: The analysis shows that 62,516 complaints were recorded in total. Most complaints were closed with an explanation (41,044), followed by complaints closed with monetary relief (14,697). A smaller number of complaints remained in progress (1,494), indicating that the majority of complaints had reached a closed status.

2) Complaint Response Analysis

Conclusion: The analysis of company responses shows variation across response categories. This provides an overview of complaint response patterns within the dataset.

3) Timely Response Analysis

Category	Value
Nil	7305534.912
No	5323925.379
Yes	4408203.738
Grand Total	4512642.471

Conclusion: The analysis shows variation in the average Complaint ID across the timely-response categories. The categories Yes, No, and Nil provide an overview of how complaints are associated with timely response information in the dataset.

4) Complaints by State

Conclusion: There is considerable variation in complaint counts across states. California recorded the highest number of complaints (13,709), followed by Texas (4,686) and New York (4,442). This indicates that complaint volumes differ substantially across geographical locations.

5) Complaints by Product

Category	Value
Checking or savings account	24814
Credit card or prepaid card	16197
Credit reporting, credit repair services, or other personal consumer reports	7710
Debt collection	2736
Money transfer, virtual currency, or money service	3453
Mortgage	6601
Payday loan, title loan, or personal loan	333
Student loan	39
Vehicle loan or lease	633
Grand Total	62516

Conclusion: The product-level analysis confirms that checking or savings accounts are the major source of complaints, followed by credit cards and credit reporting services. These product categories account for a substantial share of the complaints and can be given greater attention when examining customer issues.

6) Complaint Trend Analysis

Conclusion: The yearly analysis shows an overall increase in complaint volume from 5,394 in 2017 to 12,953 in 2022. The data therefore indicates a

substantial increase in complaints over the period analyzed, although the available 2023 data is incomplete in the table.

7) Product and Sub-product Analysis

Conclusion: The product and sub-product analysis provides a more detailed view of the areas generating complaints. It helps identify specific financial services and issues that contribute significantly to the overall complaint volume.

Overall Conclusion

The analysis of 62,516 customer complaints reveals clear differences across complaint status, financial products, states, and time periods. Checking or savings accounts generated the highest number of complaints, while California recorded the highest state-wise complaint volume. Complaint volumes also increased considerably over the years analyzed. Excel Pivot Tables, filtering, and conditional formatting were useful for organizing the data and identifying these patterns. The findings demonstrate how Excel-based data analysis can be used to transform customer complaint data into meaningful business insights.
